/ROLE:BACKEND_ENGINEER · PRAGUE / REMOTE / RELOCATION

Alexandr Rešetňak

Senior PHP Backend Engineer

hello@resetnak.cz github.com/Resetnak linkedin.com/in/alexandr-resetnak resetnak.cz

I build backend systems in PHP, Symfony/Laravel, and SQL databases for products designed to last. I combine architecture, pragmatic refactoring, and product-oriented thinking. My primary interests are backend, databases, maintainable architecture, and scalability.

Experience **9+ years**	Primary stack **PHP / Symfony / Nette**
Focus **BE / Architecture / Optimization**	Location **Prague / Remote / Relocation**

// TECHNOLOGIES

Backend
PHP, Symfony, Laravel, Nette, Doctrine, SQL

Databases
PostgreSQL, Oracle, MySQL, data models, integration

Frontend
Vue 3, React, TypeScript, Tailwind, product UI

Operations
Docker, Kubernetes, CI, RabbitMQ, Redis, Kibana, ArgoCD

// EXPERIENCE

2022 – Present

Senior PHP Developer Pražská Energetika a.s.

- Building and maintaining internal systems in an enterprise energy-sector environment.
- Backend application logic, SQL databases, integrations, and operational stability.

2020 – 2021

Web Developer LiveSport

- Building LiveSport/Flashscore web products in PHP, React, and TypeScript.
- Working on a high-traffic product focusing on performance, stability, and fast iteration.

2019 – 2020

PHP Developer IdeaSense

- Developing an in-house product, internal tooling, and automations.
- Backend and frontend development driven by the product's current needs.

2018 – 2020

Freelance Developer Custom Client Solutions

- Custom web applications, databases, administration panels, and lightweight CMS.
- Direct communication with clients, requirement gathering, and independent delivery.

2017 – 2018

PHP Programmer CORTEX

- Developing CMS and web applications in PHP with PostgreSQL.
- Maintaining existing projects and implementing new features.

// SPECIALTIES

- Backend and domain modeling for products that keep evolving.
- Legacy refactoring without unnecessary risk to operations and product team.
- Database schemas, data flows, message queues, and integrations.
- Grounding decisions in team velocity and operational stability.
- Clean code, KISS, SOLID, DRY, and long-term maintainability.
- Experience with enterprise, product development, and small teams.
